With climate change having an impact throughout the world, Prasad Lakkaraju, Ph.D., often finds himself thinking about carbon dioxide (CO$_2$). The Georgian Court University chemistry professor, who began teaching at the university in 1995, wants to “recycle the carbon dioxide and make useful molecules out of it,” he says.

Dr. Lakkaraju has six peer-reviewed publications and several conference presentations on these issues, including the co-authored “High Temperature Raman Spectroscopy Study of the Conversion of Formate into Oxalate: Search for the Elusive Carbonite Intermediate” with recent Georgian Court graduates Charlie Ryan and Anna Mead, among others. Dr. Lakkaraju also presented that paper with Charlie and Anna at the March 2016 meeting of the American Physical Society. He also holds two approved U.S. patents with four others pending. Since 2002, he has had research collaborations with Princeton University, where he pursued two sabbaticals. The primary goal of his research is to use solar energy to run reactions and to turn CO$_2$—one of the key elements contributing to global warming—into “value-added chemicals” that are less damaging to the environment.

“The benefit of this is that you can basically move the operation anywhere. You don’t need a power grid,” says Dr. Lakkaraju. “Global warming is an important issue that we want to address, and we can use solar energy to run these reactions.”

As a teacher and scholar, some of the pressure to find new grants and keep publishing is diminished, but he faces the challenge of teaching dense material to his students in a way that they can understand and to use different resources—a video of a famous researcher’s presentation or an online experiment—to keep them interested. In addition, he maintains open communication and accessibility to help them, including regular office hours. By creating a classroom environment where questions are not only welcomed but also expected, he is able to engage his students and help them master the material. He says students may be reluctant to ask questions initially, but once they begin to feel more comfortable with the material, their curiosity and interest grows. That’s how he knows he’s getting through to them. As a result of this dedication, Dr. Lakkaraju was the recipient of the Virginia Graham ’31 Award for Teaching Excellence at Commencement 2016, which means he will deliver the keynote address at Convocation 2016.

“I think about how I would want to learn the content. How would I like to be taught? That’s the way I teach it,” he says.
When Jacqueline Kress, Ed.D., was considering whether to join Georgian Court University as dean of the School of Education in 2007, the university’s longstanding reputation in teacher preparation and its application for Teacher Education Accreditation Council (TEAC) accreditation were key selling points for her. She wanted to be part of a university that had a strong commitment to teaching and teachers.

Both prior to and during her years as an education dean—20 in all, she served as Georgian Court’s dean until 2012—she taught reading and literacy courses and also provided reading workshops for teachers at area colleges and universities like Rutgers, Kean, Fordham, and New York Institute of Technology as well as at national and international reading research conferences. One of her primary career focuses has been to bring current theory and best practices in English language arts and learning to classroom teachers, particularly those who introduce and develop children’s reading and literacy skills.

Dr. Kress is the co-author of The Reading Teacher’s Book of Lists, which was released in its sixth edition in October 2015. An outgrowth of her college teaching and experience as a certified reading teacher and reading specialist in New Jersey schools, the book grew out of a collaboration with the late Edward B. Fry, Ph.D., former chair of educational psychology at Rutgers Graduate School of Education.

“Reading instruction for preservice teachers is often theory-driven or practice-driven. But teachers need both an understanding of the research base for language and learning and familiarity with the ‘stuff’ of actual classroom instruction,” she says. The book provides a hybrid by drawing on the duo’s efforts to combine and team-teach their literacy courses. Dr. Fry focused on the theoretical underpinnings of reading, and Dr. Kress showed how they related to teaching children to read and use the language arts. The Reading Teacher’s Book of Lists emerged from the handouts from these courses—materials developed for and used in actual K–12 classrooms.

From time to time, the content has had to be updated to reflect current classroom practice, standards, and research, she says. However, the book’s purpose has not changed: It was designed to be a go-to resource for teachers developing reading and language arts instruction.

“I’m thrilled that more than 500,000 teachers have used it since it made its debut, says Dr. Kress. “It’s awesome to think it continues to help teachers all over the country improve children’s literacy skills.”
Leo Morrissey travels the world finding inspiration for his art. His work typically deals with time—specifically, the personal notation of time in his everyday life. A case study in commitment, Mr. Morrissey has worked on a series of yearlong projects that involve doing a daily drawing, he has been doing this every day for 15 years.

“Every year I create an image; the image incorporates symbols that I’ve used in other works such as my profile, a house, and various geometric shapes. I do several sketches, and when I come up with a design I like, I will use it for that year,” he says.

Mr. Morrissey says there’s very little separation between his art and life. Every piece he creates is dated, noting the city where he is, creating a chronicle of time and place. In 2015, he spent time in Haiti, where he was invited to participate in the Ghetto Biennale in Port-au-Prince. There, he was interviewed by Clocktower Radio about his work. During the summer of 2016, he traveled to work with a linguist from Providence College working on a project dealing with subway systems, titled “Passengers.” The duo did the first stage of their work in early 2015 in St. Petersburg, Russia, and most recently worked on it in Madrid.

The artist has also been working for some time with Ireland’s Redfoxpress, contributing to the publisher’s “Franticham’s Assembling Boxes.” Each box features a collection of work from different artists. Collectors who purchase the boxes receive about two dozen or so small pieces, providing a varied collection from different artists. Redfoxpress is currently completing a book based on Mr. Morrissey’s work, which is expected to be published this fall.

Mr. Morrissey also completed a project in Lisbon, Portugal, this summer. Working with a bookmaker, he created a box to display a series of work that he had mailed to a gallery over the past two years. Originally the intention was to create a unique book containing the cards, but the collection was unwieldy, so the two created a box that allows people to view and handle the more than 200 pieces of work inside.

“It was handmade and looks like a big, old Renaissance book. It’s red leather with gold on the cover and is called Lisbon, to Lisbon. That was a really good project,” he says.

Now back on the campus to teach, Mr. Morrissey continues to find new opportunities to mark time and express himself through his art, while encouraging his students to do the same.
WORKING FOR A BETTER LIFE FOR ALL

While income inequality is getting more attention on the world stage, Georgian Court University’s Bertram C. I. Okpokwasili, Ph.D., has been examining the issue for many years. Born in Nigeria, the associate professor of business administration has seen firsthand how many African countries struggle with development. Dr. Okpokwasili is concerned about economic development, but hastens to differentiate between economic growth and what he calls comprehensive development—those elements that give people better lives.

“You can achieve economic growth in any country if you have natural resources. Nigeria has a lot of oil and their economy was growing at about 7 percent annually, but how much of that have they used to improve the lives of people?” he says.

Dr. Okpokwasili, a graduate of Yale and Columbia and an early retiree of the IBM Corporation, has two major research interests—income inequality and economic development. In October 2015, he presented “Income Inequality: Does State-Level Analysis Show Impact on Development? A Study of New Jersey” at the International Atlantic Economic Society Conference in Boston. He has also studied the impact of various institutions on economic development. He updated a 2007 paper he wrote on the issue—“Institutions and Development: Are Some More Critical than Others? A Panel Study of 50 countries from 2002 to 2011”—and presented it at the Ninth Colleagues in Jesuit Business Education Conference in July 2016. He has recently published three other papers interested in addressing income inequality in Georgian Court’s own backyard. After the Ocean County Chamber of Commerce requested the School of Business and Digital Media to help them study the impact of nonprofit organizations in the region, he volunteered to lead the study with his graduate students. Instead of working on case studies that were removed from their experiences, some of his students studied local organizations and others explored issues related to inequality in the region, such as gender-based wage disparities. One of the students expressed her gratitude to him for helping her become aware of serious community issues.

Dr. Okpokwasili is also involved in helping the most vulnerable members of the community. He is both a volunteer care provider and a board member for Caregiver Volunteers of Central New Jersey, a nonprofit that provides medical transport and Alzheimer’s respite care, among other services.
STUDYING HOW TO HELP STUDENTS STUDY

While most professors try to help their students do better, Christopher Perrin, Ph.D., BCBA-D, assistant professor of psychology, actually conducts research into the matter. One of his several research lines is how college students can perform better in class—an interest he developed during his doctoral program. In January 2016, his co-authored paper “Use of an Explicit Rule Decreases Procrastination in University Students” was published in the Journal of Applied Behavior Analysis.

Dr. Perrin’s latest paper explores how to help students meet milestones and deadlines for a research paper and the impact that has on helping them write better work. He developed an interest in this area partially from his own experiences as a student.

“It’s those experiences—including my own, doing well in high school then hitting undergrad and realizing I didn’t really have a great repertoire of studying behaviors and had to develop them rather quickly—and seeing that in my own students, too. I see it as the role of the instructor to help those students,” he says.

His research also gives him insight into his classroom and helps him enable his students to achieve greater success. Doing so at a university like Georgian Court is easier than at a very large institution because of the typically small class sizes and individualized attention students typically receive.

CHRISTOPHER PERRIN, PH.D., BCBA-D
Assistant Professor of Psychology

Dr. Perrin’s other lines of research include translational research: building a bridge between basic research on learning principles such as reinforcement and extinction, and then using that research to design applied interventions or applied technology in a much better way. His interest in behavior analysis began when he was working with children with severe behavioral problems. Ultimately, all of his research informs his work in making the learning experience better for his students. By studying how to design courses that help students better succeed, he believes he can have a positive impact on students who struggle with the rigors of undergraduate- and graduate-level study.

“If I create an environment that provides lots of reinforcement for the responses that I want from my students—making sure they come to class, making sure they’ve done the work in preparation for class, and making sure they’re studying outside of class—then it’s not only going to make my teaching more enjoyable, but it’s also going to make my classes more enjoyable for my students,” says Dr. Perrin. “Ultimately, they’re going to be more successful as a result of that.”
INCLUSION IN THE CLASSROOM

When students enter Hyuksoon Song’s classroom, they’re starting or continuing their path to be educators. And, if the assistant professor of education has his way, they’re going to be better versed in inclusion and how to teach their students well.

In February 2016, Dr. Song co-presented his research paper, “The Effect of Student Race and Socioeconomic Status (SES) on Pre-Service and In-Service Teachers’ Expectations” at the 39th Annual Meeting of the Eastern Educational Research Association on Hilton Head Island, South Carolina. The subject study examined the effects of student race and SES on pre-service and in-service teachers’ expectations in a variety of areas. Responses from 86 teachers found 10 areas of significance with regard to student race and SES and teacher expectations. Low SES students received lower ratings than their high SES peers in categories ranging from their ability to be self-starters and need for supervision to their likelihood of having emotional problems and ability to improve math grades. Respondents also found them more likely to drop out of high school and work at low-paying jobs.

“It is significantly important because teacher expectations can have a profound effect on student motivation and achievement,” he says.

Dr. Song, who has taught at Georgian Court for six years and says he loves the Mercy core values and the close relationships between students and faculty, was the recipient of a Faculty/Student Summer Research Grant in 2016. The focus of his research is on better preparing pre-service teachers for inclusive education through interactive narratives, especially with regard to students with special needs.

In his project, which was based on an extensive review of current literature, Dr. Song created a hypothetical inclusive classroom. The students in the classroom ranged from advanced to English-language learners (ELL) to students with special needs. The lessons were constructed via the five co-teaching models, with a series of questions to get participants thinking more about which co-teaching model they should use, based on their hypothetical classroom. The study is designed to produce an interactive, computer-based narrative for pre-service teachers who need training in inclusive classroom and co-teaching models.

Dr. Song’s research and classroom approach is focused on encouraging inclusive teachers who are aware of potential biases and the impact they have. By making pre-service teachers aware of the importance of overcoming their perceptions and focusing on the needs of the student, teachers can set up their students—and themselves—for greater success.
BRINGING REAL LIFE TO THE CLASSROOM

The health care field has undergone monumental changes in recent years. Everything from the underpinnings of the health insurance industry to the care hospitals are expected to provide have shifted. Georgian Court University Nursing Department Chair Theresa Wurmser, Ph.D., RN, is working at the intersection of nursing and this sea change. Her most recent work, “Transforming Care through Top-of-License Practice,” co-authored with Kathleen Russell-Babin, was published in the May 16, 2016, issue of the journal Nursing Management, explores how nurses can work at the top of their license within the law, providing exceptional nursing care.

Dr. Wurmser’s other work is also related to excellence and leadership in nursing. She contributed the chapter “Infrastructure for Nursing Research in a Clinical Setting” for the book Anatomy of Research for Nurses. She also worked with a colleague and recently completed a qualitative study on mentoring for nurse leaders for the Organization of Nurse Leaders New Jersey.

“Much of the work I do is on developing nurses and improving the work environment for nurses,” she says. “We want to make sure that nurses are able to perform at the top of their licenses and that their work environment is conducive to providing excellent patient care.”

This is particularly important today, when medical centers are compensated or penalized based on various quality of care measures. Nurses and other health care practitioners have greater responsibility than ever in ensuring patients are satisfied with the care they receive. As a result, Dr. Wurmser’s research informs her teaching work. With the advent of value-based purchasing, where hospitals are compensated based on specific measures related to patient satisfaction and care quality, students need to understand their responsibilities in the process.

“We have an advisory board of nursing leaders from different agencies in the community, and they wanted us to introduce more value-based purchasing content into the curriculum,” she says. “For so long, nurses have been a little disconnected from the financial side of health care.”

Dr. Wurmser also works for the Hackensack Meridian Health Network. In July 2015, she was awarded a three-year, $1.5-million grant to promote inter-professional nursing and collaborative practice through the Health Resources and Services Administration (HRSA). She and Kathleen Fleming, associate chair of the nursing program at Georgian Court, also applied for and received a $200,000 Robert Wood Johnson New Jersey Nursing Initiatives grant to address population health in the curriculum.

Dr. Wurmser’s work is both advancing nursing leadership and having a direct impact on her students. By bringing such grants to Georgian Court, she is able to expand the curriculum and give students real-world insight into the issues they will face as health care practitioners.
SCHOOL OF ARTS & SCIENCES

SILVANA CARDELL, M.F.A.
Associate Professor of Dance & Chair, Department of Dance

(2015, July). The Contained Narrative: Defining the Contemporary Artist’s Book (Art exhibition). Minnesota Center for Book Arts, Minneapolis MN.

LEO MORRISSEY, M.F.A.
Associate Professor of Art & Chair, Department of Art & Visual Studies

MATTHEW SHERIDAN, ED.D.
Lecturer in Criminal Justice

Grants, Contracts, Fellowships & Awards

SCHOOL OF
ARTS & SCIENCES

PRASAD S. LAKKARAJU, PH.D.
Professor of Chemistry

(2015, September–2016, August). Received $11,000 grant from Liquid Light Chemicals to conduct research in the area of conversion of carbon dioxide into chemicals and fuels.

NANCY SARDONE, PH.D.
Associate Professor of Education

(2016, June 7–10). Received fully funded award to attend the Holocaust Institute for Teacher Educators at the United States Holocaust Memorial Museum, in cooperation with the American Association of Colleges for Teacher Education.

MATTHEW SHERIDAN, ED.D.
Lecturer in Criminal Justice

(2015, December 3). Received award for 20 years of service as the vice president of the New Jersey Association on Correction Board of Trustees.

LOUISE WOOTTON, PH.D.
Professor of Biology; Chair, Department of Biology & Director of the Medical Imaging Sciences, Clinical Laboratory Sciences & Sustainability Programs

(2016–2017). Received $500,000 grant from the New Jersey Department of Environmental Protection for American Littoral Society, Princeton Hydro, and Georgian Court University to create a demonstration project showcasing different storm water management strategies at Ocean County Park. GCU’s portion of the total is $10,500 and is dedicated to student salary.

(2015, August–2016, March). Received $10,000 grant from the New Jersey Water Resource Research Institute for investigation of the hydrologic benefits of soil compaction management.

THERESA A. WURMSER, PH.D., RN
Co-Chair, GCU–Meridian Health School of Nursing

(2015, July 1–2018, June 30). Received three-year federal grant for $1,495,000 from the Health Resource Services Administration to support interprofessional education and care coordination at Meridian Health.

SCHOOL OF BUSINESS & DIGITAL MEDIA

ASHLEY ELMORE, PH.D.
Assistant Professor of Business & Director of the M.B.A. Program

(2016). Received Accreditation Council for Business Schools and Programs Teaching Excellence Award–Regional Recipient.
SCHOOL OF
